Please keep XM as it is. We are truckers and need to hear the information on the Instant Traffic & Weather Channel. This allows the goods to keep rolling, and helps us avoid any delays that we have a chance of getting around. We pay for this service. It is just like the same problem that the NAB brought to light, when cable and satellite TV came into being. If they are so concerned about their loss of listeners, why do they not change their programming, and upgrade it so that people would WANT to listen to them. What other service can you use that you never lose the radio station you have on, unlike regular radio? Please, reject the NAB's petition 04-160 and support the XM satellite radio, and its ability to continue providing the kind of programming that I want, deserve, and PAY for, willingly.
